Amendments to Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1-23 (cancelled)

Claim 24. (currently amended) An isolated polynucleotide comprising:

(a) a nucleotide sequence encoding a viral movement polypeptide, wherein the polypeptide has an amino acid sequence of at least [[85%]] 95% sequence identity, based on the Clustal method of alignment with multiple alignment default parameters of GAP PENALTY=10 and GAP LENGTH PENALTY=10, and pairwise alignment default parameters of KTUPLE=1, GAP PENALTY=3, WINDOW=5 and DIAGONALS SAVED=5, when compared to SEQ ID NO:6 ~~SEQ ID NO 6:~~, or

(b) a complement of the nucleotide sequence, wherein the complement and the nucleotide sequence consist of the same number of nucleotides and are 100% complementary.

Claims 25-26. (cancelled)

Claim 27. (previously presented) The polynucleotide of Claim 24, wherein the amino acid sequence of the polypeptide comprises SEQ ID NO:6.

Claim 28. (previously presented) The polynucleotide of Claim 24 wherein the nucleotide sequence comprises SEQ ID NO:5.

Claim 29. (previously presented) A vector comprising the polynucleotide of Claim 24.

Claim 30. (previously presented) A recombinant DNA construct comprising the polynucleotide of Claim 24 operably linked to at least one regulatory sequence.

Claim 31. (previously presented) A method for transforming a cell, comprising transforming a cell with the polynucleotide of Claim 24.

Claim 32. (previously presented) A cell comprising the recombinant DNA construct of Claim 30.

Claim 33. (previously presented) A method for producing a plant comprising transforming a plant cell with the polynucleotide of Claim 24 and regenerating a plant from the transformed plant cell.

Claim 34. (previously presented) A plant comprising the recombinant DNA construct of Claim 30.

Claim 35. (previously presented) A seed comprising the recombinant DNA construct of Claim 30.

Claim 36. (previously presented) A method of altering the level of expression of a viral movement protein in a host cell comprising: (a) transforming a host cell with the recombinant DNA construct of Claim 30; and (b) growing the transformed host cell under conditions that are suitable for expression of the recombinant DNA construct wherein expression of the recombinant DNA construct results in production of altered levels of the viral movement protein in the transformed host cell.
